

# ROTATIVE MONOBLOCK 270 pcs/min

## Full Revamping

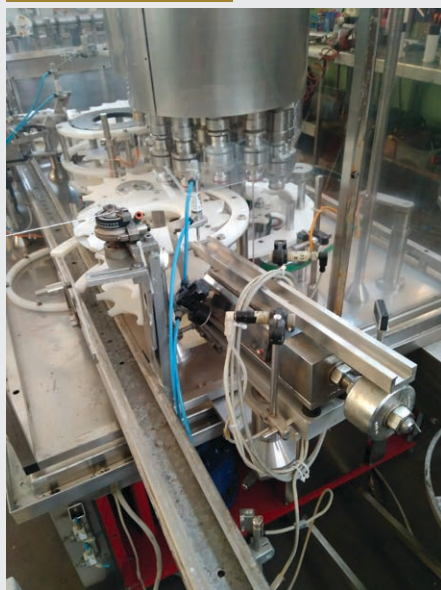

ATS Group, at the request of the customer, realizes complete revamping of machines also built by third parties.

Complete reconstruction of the machine's mechanics, complete reconstruction of the electrical panel and development of new software based on customer needs.

In this case the customer needed a machine capable of reaching a high speed. The product to be packaged is a pharmaceutical product with bottle, undercap and cap.

We have revamped a machine for filling, undercapping and capping by changing the format and making the necessary changes to achieve certain performances, plus we have supplied new bottles unscramblers, undercaps unscramblers and caps unscramblers and a labeling machine. The machine, after the fat and the test at the customer's site, travels at a speed of 270 pieces per minute. We thank our technicians for the preparation and the great passion demonstrated during the execution of this particular work.
